

Rheovis® HS 1303 (EB)

Highly efficient HASE Rheology Modifier for interior/exterior architectural paints

Application:

Rheovis® HS 1303 is an acrylic HASE thickener, specially designed for providing high shear viscosity (ICI) that also contributes to mid shear (KU) build, in a single addition. It is especially suited for interior paints, exterior paints and wood coatings and designed for brush and roller applications.

Sustainability Highlights:

- APEO free
- Low VOC acc. to EU 2004/42
- Most efficient and newtonian high shear HASE thickener

Performance Highlights:

- High shear rheology modifier with significant KU contribution
- Improved film build and hiding properties for roller and brush applications
- Excellent spatter and sag resistance
- Highly compatible with different emulsion and colorants
- Excellent viscosity stability after tinting

Characteristic Values:

	Rheovis® HS 1303
Appearance:	white emulsion
Viscosity [mPas]:	< 50
Solid content [%]:	25
pH value:	~ 3
