

# Rheovis® HS 1184

High efficiency low-shear rheology modifier that contributes to improved plaster consistency

## Application:

Rheovis® HS 1184 is a HASE rheology modifier for aqueous systems with high thickening efficiency and very pseudo-plastic rheology profile. So it is able to promote hydrophobic associations with binders and other paint ingredients. The product is especially recommended for plasters and texture to improve consistency.

## Sustainability Highlights:

- APEO free
- Very efficient at low dosage

## Performance Highlights:

- High thickening efficiency even at low dosages
- Low water absorption
- Pseudoplastic, low-shear rheology profile
- Increases anti-sedimentation and anti-sagging properties
- Easy handling due to low viscous product form

## Characteristic Values:

	Rheovis® HS 1184
Appearance:	white emulsion
Viscosity [mPas]:	< 50
Solid content [%]:	~ 30
pH value:	~ 3
