

Rheovis® HS 1276

Well balanced mid-shear viscosity builder to obtain the ideal rheology profile with a single thickener

Application:

Rheovis® HS 1276 is an HASE thickener - specially designed to provide an outstandingly balanced rheology profile for water-based coatings to increase viscosity in the mid-shear range. It is especially recommended for interior and exterior paints as it can serve a single thickener in the formulation.

Sustainability Highlights:

- APEO free
- Recommended for low VOC systems

Performance Highlights:

- Excellently balanced mid-shear thickener with effect on low and high shear
- Moderate thickening efficiency for water-based system
- Excellent anti-spattering/splash properties
- Contributes to good leveling and sagging
- Can be used as single thickener

Characteristic Values:

	Rheovis® HS 1276
Appearance:	White emulsion
Viscosity [mPas]:	≤ 100
Solid content [%]:	~ 30
pH value:	2.5
